

Thank you for purchasing your new Xcape 4.0 from Xcape Marine.

To ensure the optimum longevity and enjoyment of your new boat please register the warranty on the Xcape Marine website www.xcapemarine.com/warranty-registration-2/ and follow these few simple steps.

Assembly

When unpacking your new boat for the first time please remove and check the following items from the box.

- Boat
- Floor
- 2x bench seats
- Storage bag
- Foot pump
- Paddle leash
- Repair kit

Upon assembly twist to remove the boats valve covers and connect the pipe from the foot pump into the boats valves 1 at a time. We recommend inflating the rear tubes first.

Inflate each tube compartment until 25% inflated then insert the floor into the base of the boat, being sure the valve is at the rear of the boat and the sides of the floor are fully pushed into place. Next, slide the adjustable seats into the beads along the tubes.

Now you can continue to inflate the tubes & floor to the recommended pressure of between 4-5psi. Connect each section of the paddles together and clip into the side paddle mounts on your preferred side of the boat. Please make sure to tether the paddle with the supplied paddle leash.

Storage

Be sure to wash down the boat, seats and paddles thoroughly after use.

Always make sure the boat and accessories are dry before entering storage.

Keep the boat stored in a dry place away from the risk of mice
